DETAILED ACTION

1. This communication is responsive to the amendment filed 10/01/2007.

Claims 1-21 are currently pending in this application.

Applicant has filed a Terminal Disclaimer to obviate the double patenting rejection over U.S. Pat. No. 7,228,563. The prior double patenting rejection is withdrawn.

It is noted that applicant has other related applications (e.g., U.S. Application No. 10/360,341 filed on 02/06/2003 and U.S. Patent No. 7,287,281 filed on 06/17/2003). It is requested that any related application be referred to in the first sentence of the specification. Applicant is also requested to supply the serial numbers of any other related applications currently pending before the U.S Patent & Trademark Office.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See In re Goodman, 11 F.3d

Application/Control Number:

10/781,207 Art Unit: 2194

1046, 29 USPQ2d 2010 (Fed. CIT. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); In re van Ornum, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); In re Uogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 C.F.R.' 1.321(b) would overcome an actual or provisional rejection on this ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 C.F.R.' 1.78(d).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-21 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-18 of U.S. Pat. No. 7, 287, 281.

Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the instant application and the claims of patent'281 are claiming common subject matter, if not identical subject matter. The differences between the claims in the instant application and the claims in the patent'281 would have been

> obvious to a person of ordinary skill in the art at the time the invention was made, since the claims in the instant application represent the invention in broader scope.

> Claims 1-21 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1, 4-6, 10-21, 24-26, and 28-38 of U.S. Application No. 10/360,341.

Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the instant application and the claims of application'341 are claiming common subject matter, if not identical subject matter. The differences between the claims in the instant application and the claims in the application'341 would have been obvious to a person of ordinary skill in the art at the time the invention was made, since the claims in the instant application represent the invention in broader scope.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-21 are rejected under 35 U.S.C. 102(e) as being anticipated by **Cross et al.** (US 6910142 B2).

As to claim 1:

Cross teaches a method comprising: stalling a call to an operating system function originating from a call module; and determining whether said call module is in a driver area of a kernel address space of a memory (see Figs.2-5 and col.3, line 32-col.6, line 51).

As to claim 2:

Cross teaches determining that said call module is not in said driver area during said determining (see col.1, line 60-col.3, line 11; see also, Figs.2-5).

As to claim 3:

Cross teaches taking protective action to protect a computer system (see col.1, line 60-col.3, line 11; see also, Figs.2-5).

As to claim 4:

Cross teaches providing a notification that said protective action has been taken (see col.1, line 60-col.3, line 11; see also, Figs.2-5).

As to claim 5:

Cross teaches terminating said call (see col.1, line 60-col.3, line 11; see also, Figs.2-5).

As to claim 6:

Cross teaches terminating a parent application comprising said call module (see col.1, line 60-col.3, line 11; see also, Figs.2-5).

As to claim 7:

Cross teaches determining whether said call module is a known false positive module (see col.1, line 60-col.3, line 11; see also, Figs.2-5).

As to claim 8:

Cross teaches determining that said call module is in said driver area during said determining module (see col.1, line 60-col.3, line 11; see also, Figs.2-5).

As to claim 9:

Cross teaches stalling said call (see col.1, line 60-col.3, line 11; see also, Figs.2-5).

As to claim 10:

Cross teaches determining that said call module is in said driver area during said determining; and allowing said call to proceed (see col.1, line 60-col.3, line 11; see also, Figs.2-5).

As to claim 11:

Cross teaches determining a location of said call module in said kernel address space of said memory (see col.1, line 60-col.3, line 11; see also, Figs.2-5).

As to claim 12:

Cross teaches determining if a last mode of operation is a kernel mode (see col.1, line 60-col.3, line 11; see also, Figs.2-5).

As to claim 13:

Cross teaches disabling loading and unloading of drivers into said kernel address space (see col.1, line 60-col.3, line 11; see also, Figs.2-5).

As to claim 14:

Cross teaches subsequent to said determining whether said call module is in a driver area of a kernel address space of a memory, enabling loading and unloading of said drivers into said kernel address space (see col.1, line 60-col.3, line 11; see also, Figs.2-5).

As to claim 15:

Cross teaches said driver area is static (see col.1, line 60-col.3, line 11; see also, Figs.2-5).

As to claim 16:

Cross teaches said driver area is dynamic (see col.1, line 60-col.3, line 11; see also, Figs.2-5).

As to claim 17:

Cross teaches keeping said driver area updated as drivers are loaded and unloaded from said kernel address space (see col.1, line 60-col.3, line 11; see also, Figs.2-5).

As to claim 18:

Cross teaches hooking driver load and unload functions; obtaining loaded driver information; determining a driver area in a kernel address space of a memory; and determining whether a driver has been loaded into or unloaded from said kernel address space, wherein upon a determination that said driver has been loaded into or unloaded from said kernel address space, said method further comprising updating said driver area (see Figs.2-5 and col.3, line 32-col.6, line 51).

As to claim 19:

Cross teaches stalling a call to an operating system function originating from a call module; and determining whether said call module is in said driver area (see col.1, line 60-col.3, line 11; see also, Figs.2-5).

As to claim 20:

Cross teaches said driver area is dynamic (see col.1, line 60-col.3, line 11; see also, Figs.2-5).

As to claim 21:

Cross teaches a computer-program product comprising a computer readable medium containing computer code comprising: a malicious code blocking application for stalling a call to an operating system function originating from a call module; and said malicious code blocking application further for determining whether said call module is in a driver

area of a kernel address space of a memory (see Figs.2-5 and col.3, line 32-col.6, line 51).

Response to Arguments

4. Applicant's arguments filed on 10/01/2007 have been considered but are moot in view of the new ground(s) of rejection.

During patent examination, the pending claims must be "given their broadest reasonable interpretation consistent with the specification." In re Hyatt 21 1 F.3d 1367, 1372, 54 USPQ2d 1664, 1667 (Fed. Cir. 2000). Applicant always has the opportunity to amend the claims during prosecution, and broad interpretation by the examiner reduces the possibility that the claim, once issued, will be interpreted more broadly than is justified. In re Prater, 415 F.2d 1393, 1404-05, 162 USPQ 541, 550-51 (CCPA 1969). See also In re Zletz, 893 F.2d 319, 321-22, 13 USPQ2d 1320, 1322 (1989) "During patent examination the pending claims must be interpreted as broadly as their terms reasonably allow.... The reason is simply that during patent prosecution when claims can be amended, ambiguities should be recognized, scope and breadth of language explored, and clarification imposed.... An essential purpose of patent examination is to fashion claims that are precise, clear, correct, and unambiguous. Only in this way can uncertainties of claim scope be removed, as much as possible, during the administrative process."

Applicant should set forth claims in language that clearly, distinctly, unambiguously, and uniquely define the invention.

Contact Information

5. Any inquiry or a general nature or relating to the status of this application should be directed to the TC 2100 Group receptionist: (571) 272-2100.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to VAN H. NGUYEN whose telephone number is (571) 272-3765. The examiner can normally be reached on Monday-Thursday from 8:30AM 6:00PM. The examiner can also be reached on alternative Friday. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, WILLIAM THOMSON can be reached at (571) 272-3718.

The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
